

# CMS in general, Daisy in particular:15

1

## Detailed Daisy Wiki configuration

- Starting point ... **/usr/local/daisy/daisywiki/webapp/**
- Uses [Jetty Servlet engine](#)<sup>2</sup> by default
  - Can use [TomCat Servlet engine](#)<sup>3</sup>
  - Typically, front-end with [Apache](#)<sup>4</sup> and [ProxyPass](#)<sup>5</sup> to Jetty running [Cocoon](#)<sup>6</sup> / [Daisy](#)<sup>7</sup>
- Jetty (Servlet container) configuration file
  - **/usr/local/daisy/daisywiki/webapp/WEB-INF/web.xml**

```
<init-param>
  <param-name>configurations</param-name>
  <param-value>/WEB-INF/cocoon.xconf</param-value>
</init-param>
```

- Different URI for ProxyPass handling of cookie-based sessions
- Overall system log level (using log4j)
- Add to the CLASSPATH
- Load additional classes, e.g. JDBC drivers
- Upload files location and size limit
- Servlet URL space mapping, e.g. Cocoon and anything else you'd like
- Global Cocoon configuration file
  - **/usr/local/daisy/daisywiki/webapp/WEB-INF/cocoon.xconf**
- Site Cocoon configuration file
  - **/usr/local/daisy/daisywiki/webapp/sitemap.xmap**
- Daisy configuration file
  - **/usr/local/daisy/daisywiki/webapp/daisy/sitemap.xmap**
