

# CMS in general, Daisy in particular:12

1

## OpenJMS - Administration

- Can only have single instance per system, due to RMIRegistry
- To run multiple Daisy instances, configure a second topic and queue ...

- 

```
vi $OPENJMS_HOME/config/openjms.xml
<AdministeredTopic name="daisy2">
  <Subscriber name="fullTextIndexer2"/>
  <Subscriber name="emailNotifier2"/>
</AdministeredTopic>
<AdministeredQueue name="fullTextIndexerJobs2"/>
```

- Use OpenJMS Administrator

```
export OPENJMS_HOME=/usr/local/daisy/openjms
export JAVA_HOME=/usr/local/jdk
$OPENJMS_HOME/bin/admin.sh
  Actions -> Connections -> Online
  Username: admin, Password: freciete
```

- Use OpenJMS EventDumper

- 

```
cd /usr/local/src/daisy-1.3-RC-src/applications/eventdumper/src/java
java -cp . org.outerj.daisy.eventdumper.EventDumper
```
